

OIL AND GAS FIELD SURFACE PROCESSING EQUIPMENT

Separation / Metering / Gas Gathering Unit

In surface gathering and transportation projects for gas fields, associated gas, and shale gas, the gas gathering unit integrates the core process equipment of conventional gathering stations into one system. By employing various separation structures, it effectively removes solid and liquid impurities from the raw natural gas, while enabling gas gathering, separation, metering, safe venting, and drainage functions, etc..

Chemical Injection Unit

Used in natural gas well sites, gathering stations, and purification plants, this unit enables the precise dosing and injection of chemical agents such as methanol, defoamers, corrosion inhibitors, drag-reducing agents, and surfactants.
